Today, Adobe is rolling out new features and updates across Lightroom, Photoshop, Illustrator, and Adobe Firefly — all designed to help you move from idea to final delivery faster than ever. Whether you're refining hundreds of photos, fine-tuning typography, resizing vector graphics, or moodboarding your next campaign, the latest Creative Cloud update delivers speed, precision, and smarter AI to power your workflow. Lightroom: One-click brilliance for every shot Quick Actions — Scene Enhance Available for Lightroom on mobile (iOS & Android) and Lightroom for web Lightroom's new Quick Actions provide creative assistance tailored to your unique photo and empower you to effortlessly make detailed, selective edits on-the-go. This includes the new Scene Enhance feature, made specifically for landscape photos, which can accurately detect outdoor elements like the sky, water, ground, and more, and apply edits isolated to each element. Available for Lightroom, Lightroom Classic, Lightroom on mobile (iOS & Android), Lightroom for web, and Adobe Camera Raw Reflection Removal is now widely available in Lightroom and Lightroom Classic. Window reflection removal that's pure magic —The release of Reflection Removal in Adobe Camera Raw earlier this year left some photographers speechless, and it's now widely available in Lightroom and Lightroom Classic supporting non-Raw formats. This new feature uses AI to detect and erase unwanted reflections from glass with awe-inspiring detail. You can even choose to keep some of the character by adjusting the strength slider. New one-click people detection and removal — Generative Remove can also now detect people who are not the focus of your photo for removal in a single click. It's a simple and fast way to clean up your shot without having to make meticulous selections. Plus, you will always have full control to refine the removal further. Video Sneak Peek: Fast-track your photo selection process Coming soon to Lightroom and Lightroom Classic Have an early look at powerful new capabilities coming soon to Lightroom that will help to surface your best shots. We're building filters like subject focus, eyes focus, and eyes open detection to support your creative decision-making process and speed up your review time. You'll also have the ability to use AI-assisted options to clean up unwanted images, or group similar images together, so you can stay organized and get to editing faster. Photoshop: Typography & selections re-imagined Dynamic Text Arrange text into sophisticated layouts in a fraction of the time. Dynamic Text automatically resizes, reflows, and reformats type to fit any bounding box — while giving you additional settings and granular control over line and word spacing for pixel-perfect typography. Improved Select Subject & Remove Background with cloud processing Cloud-powered processing now enhances the Select Subject and Remove Background features, making your editing faster and more precise, even when you're working with hair, complex edges and fine details. Click once for an accurate selection and jump straight to making creative edits. Illustrator: Generative Expand & performance boosts Generative Expand Need your design in a different ratio or dimension? Generative Expand, powered by Adobe Firefly's Vector Model, grows your vector graphics or the entire artboard beyond its original bounds while seamlessly matching your style, color, and detail. The generated vectors are fully editable, so you can tweak with total control. Enhanced performance & precision Real-time creation — Now you can move, rotate, and scale vector graphics on the artboard faster and more smoothly than ever. Live Transform is now smoother as well, with faster rendering and no more blue indicator lines. Up to 5x faster effects — Enjoy faster performance in the 10 most popular Illustrator effects — Calligraphic Brush, Stroke effect, Offset Path, Art on a Path brush, Roughen, Drop Shadow, Blue, Inner Glow, Outer Glow, and Rasterize. Enhanced Pencil Tool with live preview shows strokes as you draw, dynamically applying effects and smoothing curves for a more intuitive experience. Firefly Boards: Seamless conceiving, broader inspiration With Creative Cloud Pro, you can now jump-start work in Firefly Boards — a new space to ideate, mood-board, storyboard, and generate text, images, and now video, all within Adobe Firefly. An AI-powered surface, Firefly Boards is a collaborative, intuitive way to brainstorm alone or across teams, exploring creative concepts and iterating on ideas before ultimately jumping into production. In April, we broadened Boards' creative palette by introducing image models from partners including Google, OpenAI and Black Forest Labs. Today, that range widens again with new model integrations from Ideogram, Luma AI, Pika, and Runway. You can freely toggle between models right on the canvas — always with clear labels, so you know exactly which model is powering each idea — all without needing additional accounts or subscriptions to these partner models. Start working smarter and more efficiently with today's brand new features, all of which are available with your Creative Cloud Pro subscription. Click here for more information on our plan options.
