Since its creation in 1881, Haulotte has been a global leader in manufacturing people and material lifting equipment. Based on our knowledge of construction worksites and a multitude of lifting applications (indoor or outdoor), we have designed seven different ranges: Our telescopic boom lifts (14 to 43m) and our light weight booms (up to 16m), our rough terrain, diesel or electric articulating booms, push around lifts rising to 14m, our electric or diesel scissor lifts (8 to 18m) articulated and telescopic trailers and vertical mast, the mast can reach 10 meters height. Finally, we have designed a range of telehandlers to meet your specific needs: compact telehandlers, high lift telehandlers (up to 17m) and heavy load capacity telehandlers, lifting up to 7.2 tonnes. Stabilized terrain: Electric scissor lifts operate on all types of stabilized terrain. Very flexible, they offer more compact dimensions than the diesel versions, and can be used indoors and outdoors, even at full height and without load restrictions Rough terrain: With their large platforms, scissor lifts have the highest load capacity of all types of work platforms. Up to 4 workers can be lifted to complete the most demanding jobs. The standard platform extensions provide even more workspace and extra reach. With astraight, vertical elevation, they are really simple to use. The high gradeability and tilt capacity of rough terrain scissors enable work on the most challenging terrains with outriggers to provide maximum stability. PULSEO scissors offer you the advantage of emission-free and silent indoor work. Explore the range We use essential cookies to make our site work.
