But, do yourself a favor and ensure you include a skills section on your resume. There are two reasons for this. First, it helps Applicant Tracking Systems (ATS) determine if you're a good fit for the job. Second, it gives hiring managers quick insight into whether you might be a contender. Read the job description extra carefully to determine which of your skills are most suited to the particular job, and emphasize them on your resume. But don't plagiarize. The person reading your resume likely wrote the job post, and let's just say that wouldn't make a good first impression.It might not seem like an important section, but it's almost as valuable as the work experience you list. Ensure the skills you list aren't arbitrary. For example, it wouldn't be particularly useful for the hiring manager to know that you're a talented needle felter when they're really looking for someone who can offer compassionate, patient-centered care. or download as PDFIf you just wrote your work experience down on your certified pharmacy technician resume and realized you have only filled half the page, don't fret.Try including some relevant projects. You can even include hobbies and interests on your resume, but just be aware that the hiring manager is likely to ask you about these in an interview. So, if you're an avid rock collector, be forewarned. It might take more than a second to figure out how rock collecting makes you a better pharmacy tech, so ask yourself these questions now rather than waiting for an interviewer to catch you unprepared.A pharmacy technician handles filling prescriptions and checking the inventory. Techs give medicine to patients, whether over-the-counter or with a prescription. They also accumulate prescriptions and deliver information to patients and other healthcare professionals.Most pharmacy techs work in the public sector and hospital pharmacies. They can also work in the sales department in the pharmaceutical industry. As a technician, you can also work in prisons, schools, and the military sectors.When looking for a job, highlight your skills and experience with a well-formatted resume to help employers select you as the best fit. We'll walk through four tips for your pharmacy tech resume, covering your skills, resume format, job experience impact, and resume customization.When a company advertises a job vacancy, many applications prevent that company from carefully looking through each one. So, companies use applicant tracking system software that screens through resumes to weed out candidates.Unfortunately, if you're a highly-qualified candidate but fail to include the right keywords in your resume, you'll miss out on the job simply because the robots dumped you in the circular file. You must create a resume so the ATS finds you an ideal candidate for the job. Pass the ATS; then your resume will actually make it to human eyes.Employers look at resumes and applications before scheduling interviews. Your pharmacy technician resume should highlight your abilities before you meet an employer for your interview. If those capabilities aren't readily seen throughout your skills section and job experience bullet points, chances of interviewing are slim to none. The resume skills section is crucial. The ATS is set to screen the skills required for the job. Knowing what you should include in your skills section is a matter of reading through the job description ad to determine what an employer is particularly seeking. This pharmacy tech job candidate took the time to read through the skills listed in the job description: You'll see in the example above that there are both hard and soft skills. As a pharmacy tech, include more hard than soft skills. Hard skills are fundamental to your tech work and are the qualifications needed for your job. On the other hand, soft skills are more general abilities beneficial to do your job well, such as customer service or verbal communication. While this isn't an exhaustive list, pharmacies are looking for these sorts of hard skills:Insurance coverageCompoundingNarcotic inventoriesThird-party billingCoordinating prior authorizationsPatient confidentiality & HIPAAExtensive knowledge of generic and brand-name drugsPrescription filling & labelingSoft skills can be important, especially as pharmacy techs must collaborate with medical teams and the public. Soft skills could include:Attention to detail Interpersonal communication Compassionate & empathetic Time management FlexibleWhen writing your resume, ensure your resume has the proper format. A suitable layout highlights the key areas of your resume and attracts the hiring manager to read through your resume. A good resume format presents the essentials upfront to entice the hiring manager.Use the reverse-chronological format, which helps both the ATS and employers read your resume. Listing your experience in reverse-chronological order keeps the most current, relevant information in the top third of your resume, where the employer's eyes will be drawn first. Beyond this, we think you'll find the following formatting tips helpful when it comes to beating the ATS and attracting the attention of an employer:Margins: Aim for half to one-inch margins all around. Length: Keep your pharmacy tech resume on an exact page. Less than a page looks like you don't care, but going over a page looks messy and incomplete. Bullet points: Use bullet points in places like your work experience to break the text into easy-to-read chunks. Icons/images: Avoid them like the plague. The ATS gets quite befuddled when you use something besides the basic, round bullet point. Customization: We'll talk more about this later, but the point is that your resume shouldn't be generic or able to be passed off to any employer. Customize your skills, work experience, and career summary or objective (if you include one) before we go further, let's unpack that resume objective and resume summary issue. Both are short paragraphs of two to three sentences each; while they're similar, some differences are worth noting. An objective should be specific about the position and the type of job you want. Its purpose is to identify the career you seek and how you can add value to the company. Consider an objective if transitioning to pharmacy tech work from another field. You might also use an objective if you're an entry-level worker. A summary highlights your qualifications for the job based on your combined (10+ years for a summary) experience. It gives the hiring managers a quick synopsis of your history and underscores your strengths and skills. Like the objective, a summary should be tailored to your desired role. While specific, customized objectives and summaries are effective, this section won't do you a bit of good if you slap something together willy-nilly. If you lack the time or energy to do it right, skip it. In the following objective and summary samples, note that the job seeker demonstrates:Clear and valuable personal qualities Quantitative information Top skills and capabilitiesInterest in a specific company and roleCritical and quick-thinking registered pharmacy technician with 4 years of experience in filling prescriptions, processing insurance claims, and providing unparalleled customer service in a fast-paced retail pharmacy. Seeking a position at Shield's Health where I can grow in the healthcare industry through pharmacology best practices, inventory management improvements, and increasing customer retention rates. Empathetic and quality-minded certified pharmacy technician specializing in long-term care and senior communities for the past 13 years. Offering expertise in dedicated patient support, customer service excellence, and extensive pharmacology knowledge to provide efficient processes and inventory management while never compromising patient confidentiality or safety. Motivated to lead a team of pharmacy technicians and apprentices at CVS Health.When reviewing your resume, it's crucial to set yourself apart from the competition. As a pharmacy technician, you're responsible for more than just filling prescriptions. Do your best to show action and achievement when discussing your experience. Remember, it should be relevant and tailored to the specific responsibilities listed in the job description ad. One of the best ways you can demonstrate your impact at previous jobs is by sharing data and stats. Metrics put weight behind your words. While words are easy enough to dismiss, numbers provide credibility and make employers pay attention. Knowing what you should quantify isn't always easy, but think about the following:Speed and accuracy. Your work as a pharmacy tech requires you to be quick; however, it can be detrimental to you, the company, and your customers if you sacrifice quality. Can you demonstrate your ability to work quickly, effectively, and efficiently through numbers? Customer retention: As we said earlier, your job is more than filling prescriptions. Customer service is a large part of what you do, and if customers are dwindling, the company is relying on you to rebuild trust and retain those customers. Perhaps you can showcase your ability to win customers and keep them long-term. Output: Depending on the size of the pharmacies you've worked for in the past, how much you fulfill in one day will differ. Discussing this with an estimated number of customers assisted per day or orders fulfilled may be relevant to the job you're applying for.Can you find the above three quantifiers in the job description bullet points below? We've hinted at this and can't stress it enough. Every pharmacy has different roles and responsibilities, and the best way to get shortlisted for an interview is to tailor your resume for every job application. Customizing your resume to fit the job description helps prove you're the right candidate.Tailoring your resume doesn't mean having to recreate it every time. Instead, it involves replacing and adding details according to the job's roles. Career experts recommend adjusting a few sections to suit the job description. If you include a summary or objective statement, specifically discuss the most important skills and the company itself. Your skills section should also reflect the skills prioritized in the job description. Lastly, if the job ad states that the pharmacy needs someone to manage the inventory or lead a tech team, consider how you might demonstrate similar experience in your work history section. Let's explore how to adjust several pharmacy tech resumes to the role you want.You likely have at least two or three years of experience under your belt, and if this is the case, you may decide to forgo the career objective.If you do include one, remember the tips we discussed earlier. Hiring managers are looking for a dependable technician with the right skills and qualities and someone who has already trained and received certification.Pay attention to state laws and requirements. List your certification on your resume because this will be a deal breaker for many employers if you forget to include it.At the risk of stating the obvious, your hospital pharmacy tech resume should highlight your experience working in hospitals.Use your job experience bullet points to discuss medication distribution to the appropriate floors or units, surveillance for drug misuse, and assisting patients with inquiries and problems. Entry-level pharmacy technician resumef you're an entry-level pharmacy technician, you have no work experience in the field. You must write a resume that catches the attention of hiring managers.In your experience section, include past jobs, such as retail, restaurant service, administrative work, childcare, etc.If you have no work experience, you can emphasize any education beyond high school and certificates you've earned that qualify you to be a pharmacy tech. A long-term care pharmacy technician provides pharmaceutical services to assisted living homes.Your resume should highlight your knowledge of planning, implementing, and evaluating plans and your ability to communicate and collaborate with the nursing staff. You'll also want to demonstrate that you're a pro when treating elderly and ill patients with compassion, empathy, and dignity.A registered pharmacy technician is certified by state law. They understand medical terminologies, names, and brands of medicines.Your resume must state that you're a registered pharmacy technician. For a role specifically titled this, include "Registered Pharmacy Technician" in the job title.Include a license/certification section in the sidebar or bottom of your resume where you can list your state certification. The ATS software weeds out unregistered candidates from the many applications.Taking the initiative to work on your resume is the first step to getting the job.
