To avoid severe injury or death from a moving gate or garage door: - Always keep remote controls out of reach of children. - Never allow children to operate or play with the remote control transmitter. - Activate the gate or door only when it can be clearly seen, is properly adjusted and there are no obstacles to the door's travel. - Always keep the gate or garage door in sight until completely closed. Never permit anyone to cross the path of a moving gate or door. To program the universal garage door opener remote control: 1. Determine if your garage door opener uses a Smart/Learn button or DIP switches. The Smart/Learn button or DIP switches are usually located on the motor unit or external receiver. 2. If your garage door does not have photo-eyes safety sensors, it may not be compliant with current federal safety regulations and should be replaced. To program Chamberlain remotes: - Press the program button until the LED lights up. - Refer to Chart A to determine how many times to press the button and write the number in the blank on Step 5.1. - If programming fails, reverse the DIP switches (OFF to ON and ON to OFF). To program Genie IntelliCode II: - Press and release the Smart/Learn button. - Refer to Chart B to determine how many times to press the button and write the number in the blank on Step 5.1. Para evitar posibles lesiones graves o mortales debido al movimiento de una compuerta o puerta de garaje, es fundamental seguir las instrucciones de seguridad proporcionadas por el fabricante. 1. Mantenga siempre los controles remotos fuera del alcance de los niños. No permita que los niños operen ni jueguen con los transmisores de control remoto. 2. Active la compuerta o la puerta solo cuando la pueda ver claramente, esté bien ajustada y no haya obstrucciones en el recorrido de la puerta. 3. Mantenga siempre la compuerta o la puerta del garaje a la vista hasta que esté completamente cerrada. No deje que nadie cruce la trayectoria de la compuerta o puerta en movimiento. ###ADVERTENCIAThe Clicker KLIK1U Universal Remote Control is a user-friendly solution for accessing your garage securely and conveniently. This device can combine two remotes into one, making it an ideal replacement for lost or damaged ones. With its simplicity and compatibility with major brands, this remote control streamlines your garage door operating system. The Clicker KLIK1U Universal 2 Button Garage Door Opener Remote is now programmed correctly. Using it is as easy as pressing one of the two buttons - usually, one opens and closes the garage door, while the other might control a light or another feature. Refer to your manual for details on specific functions and customizing options. If the remote stops working or the range decreases, check the battery and replace it if necessary. To do this, open the back panel with a screwdriver, remove the old battery, and insert a new one (making sure it's oriented correctly). Close the panel and test the remote to ensure it works. If not, refer to the troubleshooting section below. Clicker KLIK1U remotes can sometimes experience issues, even though they're designed to be easy to use. Here are some common problems and how to troubleshoot them: If your Clicker KLIK1U remote isn't working, check if the battery is installed correctly and fresh. If not, replace it. Reprogram the remote if necessary. Make sure your garage door opener is compatible with the Clicker KLIK1U remote. Some older models might not be supported. If the range of your remote is limited, try replacing the battery or moving closer to the opener. If the remote isn't activating the garage door, check if it's working properly by using the wall control. Ensure the safety sensors are aligned and reprogram the remote if necessary.
